

Unit 7: Volume

A: Introduction

Volume of all prisms is calculated using:

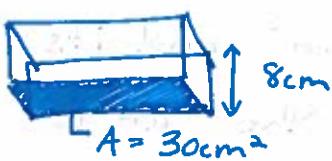

$$V = A_{\text{base}} \times h$$

- A_{base} will have units².

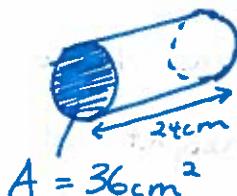

Examples:

1. Determine the volume of each prism or cylinder.

a)

b)

$$V = A_{\text{base}} \times h \quad \checkmark$$

$$= (30)(8) \quad \text{cm}^3 \times \text{cm} \quad \checkmark$$

$$= 240 \text{ cm}^3 \quad \checkmark$$

$\sqrt[3]{}$

$$V = A_{\text{base}} \times h \quad \checkmark$$

$$= (36)(24) \quad \checkmark$$

$$= 864 \text{ cm}^2 \quad \checkmark$$

2. What is the volume of the prism with:

height = 27 cm; area of base = 42 cm^2

$$V = A_{\text{base}} \times h$$

$$= (42)(27)$$

$$= 1134 \text{ cm}^3$$

3. What is the height of a prism if the volume is 64cm^3 and the area of the base is 16cm^2 ?

$$V = A_{\text{base}} \times h$$

$$64 = (16)h$$

$$64 = 16h \quad \text{to linear equation}$$

$$\frac{16h}{16} = \frac{64}{16}$$

$$h = 4\text{cm}$$

4. A can of paint has a base area of 31.2cm^2 and its height is 35cm . The height of the paint in the can is only 30cm . What volume of paint is in the can?

$$V_{\text{paint}} = A_{\text{base}} \times h_{\text{paint}}$$

$$= (31.2)(30)$$

$$= 936\text{cm}^2$$

~~if 35 is the entire can not just paint.~~
